

MSC Terminal Valencia, Spain

Strategic located (350km from Madrid) is the MSC Terminal Valencia. The terminal is an ideal logistics platform for the distribution of transshipment traffic between the five continents.

CERTUS Automation provided this brownfield location with an AutoGate solution consisting Gate OCR for output of Container ID, ISO Code, Damage images and Gate Kiosks with lane signage, barriers, traffic lights etc.

By automatically recognizing vehicle ID and container details using OCR systems and by verifying these automatically against TOS data, inspection tasks can be optimized if not fully automated. This effectively eliminates any checking tasks thereby reducing error and increasing transaction speed.

MSC Valencia was the first implementation site for the CERTUS PASS Gate Operating System. The AutoGate solution is seamlessly integrated with the terminal operating system CATOS by Total Soft Bank.

Highlights

Operational Since

2014

Deployed Products:

- Gate OCR Portal
- Gate Kiosk
- Gate Control Equipment
- PASS Gate Navigator

Benefits

Increased Productivity

Reduced Terminal Errors

Increased Data Accuracy

Improved Truck Turnaround Times
